NATIONAL HIGH TECHNOLOGY CENTRE OF GEORGIA

Welcome!

Dear Valued Customers, Partners and Friends,

True North offers intelligent, solid management and consulting services for demanding business situations. With a lot of experience from its own leadership positions, authentic knowledge and fresh ideas.

- We act respectfully, respect the life performance of the entrepreneur as well as the interests of all Stakeholder.
- We act with confidence, go transparent front and secure the understanding and support of all participants.
- We live the commercial virtues and gain where necessary, the sense of diligence and thrift and the work ethics.
- We act in a straight line, say what we think and do what we say and keep us out of "political games".
- We act **fearlessly**, proceed without hesitation and do what is needed

That is why we have given ourselves a name, where the direction and sincerity enroll simultaneously: A clear view at the target. Cool in thought with passion for the cause. Facts driven and True to the analysis, transparent in the implementation. And reliable as the gyrocompass that won't let itself get worked up.

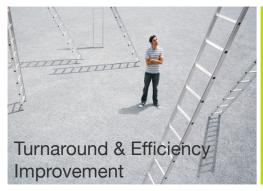

Uwe Jenssen Dr. Frieder Schuppert Michael North

Electrical industry, electrical plant construction. Energy: energy producers, power station equipment, suppliers. Services: logistics, facility management, direct marketing, etc. Food industry. Health: hospitals, old people's homes, medical equipment

The idea of the "New Centre" is born. A lot of questions are arising:

What is exactly the What are the How can the structural and strengths and the external experts economic situation Any First opportunities and be financed? of the center? description and what are weaknesses and technical treats? specifications? Are there already patented products? Are the product likely to perform, be profitable How has a team of and meet customers and internal and external distributors expectations? experts to be structured during the different How will the product be built? phases of the project and How will it work? What software how has the collaboration and operating system is to be organized? What is the needed? Will it fit into smart expectation of technologies? the Georgian Government? Are risks (product, Are we able to execution, etc.) deliver quickly acceptable? enough? Are there any international donor organizations What different available to support What are the market and fund the project? interest groups expectations of the real are involved? Estate redevelopment?

Background of NHTC and it's current challenges First layout of the "New Centre"

The **Principal intends to restructure and resettle** the NHTC (also Centre or Institute) from its current location within the City in line with the City Development Plan. The Centre, as a state-owned company, is engaged in the production of Boron, Oxygen, Carbon ultrapure isotopes. The Centre is one of the very few companies engaged in this production worldwide and this potential should be harvested. The project therefor can be considered in several parts:

- Resettlement of the NHTC using the freed-up land and existing assets as a way of financing the new land and constructions
- Restructure the commercial relations of the Centre to achieve a higher participation in the sale proceeds with the perspective to make sales activities available for NHTC on its own.
- Finalize the privatization of the Centre to make it a fully privately-owned company and respecting potential state interests
- Possible acquisition of international trade companies to gain higher profitability
- Obtain international equity and debt financing to achieve the project goals
- Develop and include the local management and staff of NHTC to gain long-term
 sustainability for the future of the Centre and act as a benchmark for Georgian economy

 \text{9 28. Februar 2018} \tag{\text{TrueNorth - Offer NHTC}} \text{ \text{\$\text{C} TrueNorth 2015}} \text{ \$\text{Seite 6}}

The idea of the "New Centre" is born. How can the idea lead to success?

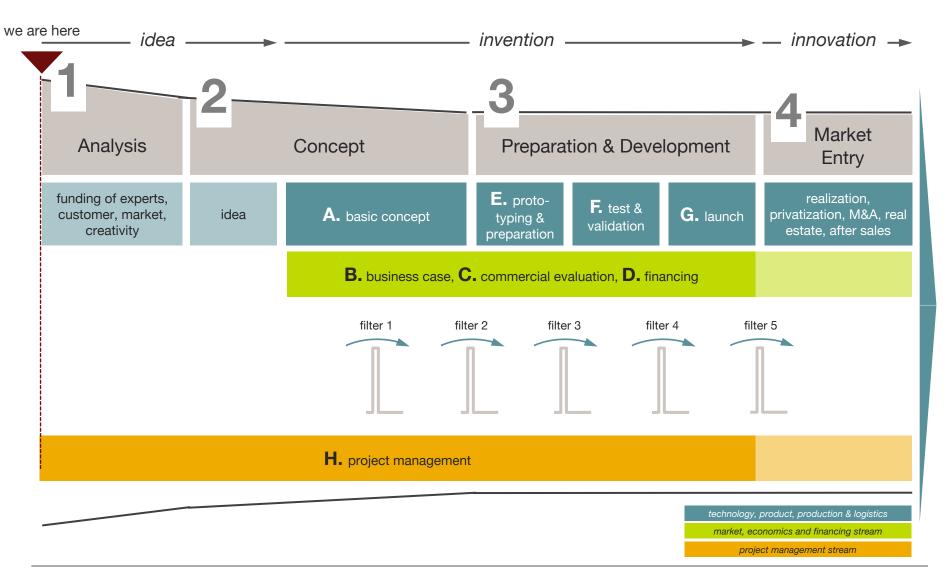

Crucial questions to be answered

- How has the project to be shaped? Which steps, filters and milestones have to be taken?
 How is the time schedule to be defined? And what cost are to be expected?
- How has a team of internal and external experts to be structured during the different phases of the project and how has the collaboration to be organized?
- Which **external services** have to be taken in and how have the terms of fairness, competitiveness and suitability of the terms and conditions offered by any party to be involved whether industrial or financial?
- How can the financing to be secured? Are co-investors, and which ones, necessary? How have the appropriate transactions to be structured?
- What are the market expectations of the innovation? How will a valid business plan look like?
- Can the necessary external experts be financed through international organizations like Worldbank, IFC, EBRD, KfW or others?

We propose for the project a 4-phases innovation process as a well defined stage-gate-process

© 28. Februar 2018 TrueNorth – Offer NHTC © TrueNorth 2015

Start with the Analysis and the Project Management has thereby all activities, the project budget and project reporting in hands

funding of external experts and analysis

Get international donor institution to start with initial analysis

- Understand the capabilities of the NHTC management and staff to fill potential gaps with external expert and managers which will act as catalysts for the whole project.
- Develop a SWOT analysis together with a detailed description of the situation "as it is" including strength and opportunities, weaknesses and threats.
- Draft an overview of the real estate including buildings and the rights of use including the views of the municipality and the Georgian Government. Understand the local market for real estate development.
- Understand the old privatization situation including the involved groups.

project management

monitor and control the project activities and to secure alignment with the project budget

- The project management starts up with the definition of the project governance (project organization, meetings, reports, escalation procedures, etc.), the bringing together and setting up the team and to kick off the project.
- Initially the project structure with all the necessary activities (detailed planning according the above described logic and tasks), capacities needed and a time schedule have to be worked out as well as a first project budget.
- Ongoing works within are the execution of the project governance and the project controlling. The to be expected plan changes – for this is an development project – have to be worked out clearly and have to be presented to the steering committee for decision.

The "technology, product, production & logistics" stream comprises all necessary gates to a successful go live

basic concept

clear view on the possibilities and the limits of the technical realization.

- draft technical product concept with detailed product specification, technical feasibility, product architecture principles, technology needs and access, regulatory constraints, patents & licensing, etc.
- draft production concept with production technology needed including make-or-buy concept and supplier available, machinery/investments needed.
- draft architectural study and removal concept

Preparation & prototyping

- Prototyping is more or less a controlled cycle of small-scale-realisation with following improvements.
- Detailed static and architect plans, and alternatives are to be developed with feedback of local authorities and organizations

testing and validations

- large-scale production needs
- patenting of the research results
- iterations until a going-live is evaluated to be successful
- live testing of a production start and a live testing of the supply chain too.
- governmental pre-approvals

launch

- to prepare and realize the market entry strategy
 minute plan for the the last weeks before and after the "going-live"
- monitor it on a daily basis to success.
- Promotion for all activities

The "market, economics and financing" stream accompanies the economics of the project from an early stage to the end

business case

achieve very early a validation of market ability and the market chances of the new offer. It is as well to be worked out initially and to be refined with the progress and the learnings of the project.

- market analysis: market dynamics and industry characteristic (economics of scale and scope, technology drivers trends), the effect of external factors such as regulation and public policy, market size and growth projection (evaluate market potential and revenue potential, segments of the current target market, key segment characteristics and the market's implicit and explicit needs), to identify market structure and competitor's positioning (strengths and weaknesses, products and services offered including substitutes, their key segments targeted, pricing and positioning)
- product/market concept: customer value proposition, customer interest, substitution products, risk-/reward analysis, and the positioning (concrete products and services offered, segments targeted, pricing and distribution) etc.
- market entry strategy, how to gain market access (channel options for Existing markets, availability of channels and access to key segments) and a model for the diffusion of the new product into the market, which depends amongst others on factors like renovation cycles of the private households. Derived from that there is to calculate the volume planning for the new product.

commercial evaluation

clear the economics of the product and the project during the whole project lifetime.

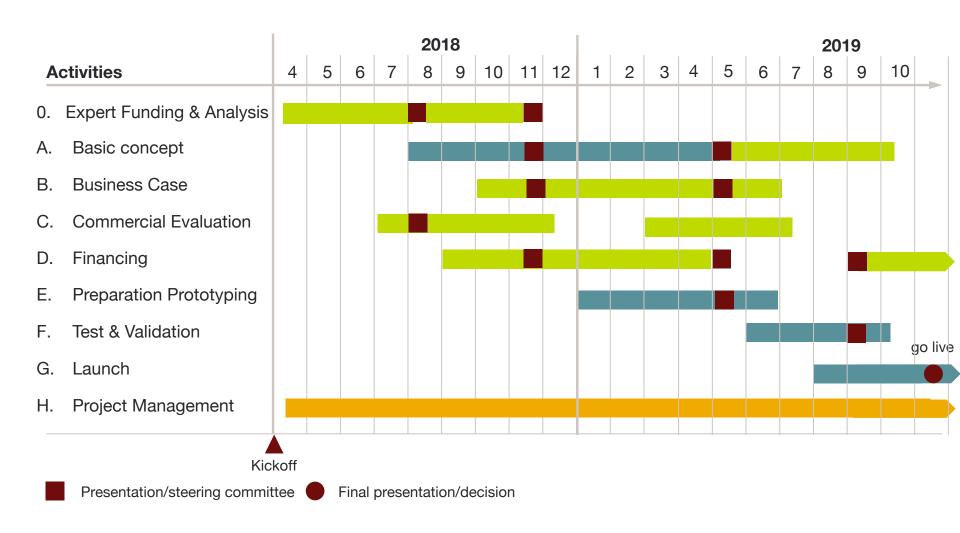

- work out a first product calculation based on the technical product concept as a calculation scheme and a concrete calculation.
- P/L and balance sheet planning including one offs and investments related to the project. The planning should ideally worked out as a variable cost contribution calculation which can easily be varied with volume changes and give a outlook to 3 to 5 years and detailed information when and under what conditions the break-even will be reached.
- business valuation of the future center and the real estate development.

financing

Derived from these numbers the **financial needs and the overall funding** with all possible options (equity, loans, etc.) have to be evaluated and structured. The **M&A and Privatization strategy** will be based on above elaborated analysis and strategies.

Draft Proposal Project Schedule

TrueNorth - Some Impressions on Market Entry and Strategic Planning

Strategic Planning

TrueNorth

Typical traps affect the value of the strategic planning process

Strategy – Strategic Planning

Is the early warning system effective?

- Is the business environment monitored regularly?
- Are there strategic scenarios?
- Is there a link to risk management?

Are the competitors well monitored?

- Is there a regular SWOT analysis of the competitors?
- Is there a regular quantitative competition • analysis?

Is the strategic plan well quantified?

- Are there business plans, scoring models ore utility value analysis?
- Are there rules of thumb?

Is the strategic plan linked to operative planning?

- Is the strategic plan defined top down (company to business segments)
- Is the strategic plan basis for the operative annual plans and budgets?

Is the organization informed and actively committed?

- Is the communication about strategic goals openly and target oriented?
- Is the compensation linked to strategic performance?
- Are people on all levels involved?

Target Planning

For whole company

- Define Vision: "who and where are we today and who and where want we to be in 5 years"
- Define mission statement
- Define strategic goals

2 Strategic Analysis

For company and each business segment

- External analysis (market & competition)
- Internal analysis resources
- Synopsis: SWOT

3 Strategy Selection

- Define portfolio management (whole company)
- Select and formulate strategy for each business segment and elaborate alternative strategic options
- Quantify strategic options in business plans

4 Implementation 5

- Implement business segment plans
- Design structures and systems for all business segments
- Complete business plans for all segments
- Combine business plans on company level

Strategic Controlling

- Carry out planned actions with operational targets, budgets
- Implement benefit tracking process
- Perform regular performance management and operational checks

The key for a successful market entry is to understand the targeted market and the forces of competition

Strategy - Market Entry

Understand Market Dynamics

Understand Industry Characteristic

- Economics of scale and scope
- Technology drivers trends
- Effect of external factors such as regulation and public policy

Understand Market Size and Growth Needs

- Evaluate Market Potential
- Segment current target market
- Key segment characteristics
- Domestic versus global market
- Market's implicit and explicit needs

Competitor's Positioning; Strengths and Weaknesses

- Identify market structure and competitors
- Products and services offered
- Key segments targeted
- Pricing and positioning

Market Access: Channel Options For Existing Markets

- Availability of channels
- Access to key segments

Capability Assessment and Offering

Product/Service Offering

- Features of new products
- Service-evolution plans

Non-Product Related Sources of Differentiation

- Customer service
- Necessary to access to key market segments

Economic Assessment

- Cost of manufacturing
- Cost of bringing to market

3 Strategy Formulation

Develop Product Market Strategic Options

- Develop strategic segmentation based on needs and new service offering
- Positioning and targeting strategy
- Pricing and promotion
- Channel/market access

Assess Options and Select Optimal Option

- Implement ability risk
- Economic assessment –cost–potential and revenue

Develop Core Benefit Proposition

- Value proposition of the offering to key
- segments
- Branding strategy

Mergers & Acquisitions Activities Are a Means of an Active Portfolio Management

Portfolio Management

- Adding Value to Existing Portfolio
- Growth in existing lines of business
- Reorientation or innovation on the product and market side
- Regional expansion
- Selectively filling gaps in existing portfolio
- Creating Value through buying resource synergies and/or especially innovation of the business model
- Create value through restructuring

- **2** Growth through New Business
- Enforce existing business segments
- Diversification into new lines of business

- Adjustment Through Divestment
- Disposal of business lines
- Selectively "clean the house" in existing business lines
- 4 Set Strategic Goals
- Define the target portfolio
- Identify levers to effect reorientation and optimization
- Identify resource and business model innovation synergies
- Set and quantify goals, e. g. sales profit, cash flow, etc.
- Work out action plan with time schedule, milestones, responsibilities etc.

Define Internal Growth Plan
Set Up Mergers & Acquisitions Process

TrueNorth Manages the Special M&A Success Factors that Lead to the Best Results for Our Customer

Speed

Right Valuation

Expertise & Professional

Tools

Interest-free Process

Effective Information

Professional Negotiation

- Full concentration for the M&A process – free of day-to-day business - 100% of our capacity is at your service
- Broad network of internal and external specialists
- Profound understanding of European "Mittelstand"

- Right valuation is going to be one of the crucial factors to achieve the best price possible.
- Mastering the math's •
- Theoretical Knowledge, esp. legal and fiscal knowledge and capital market knowhow
- Broad Practical skills, esp. transaction-know-how
 - Having profound sparring partners
 - Utilization of professional tools (company profile, information memorandum, ...)
 - Systematic approach

- Systematic Evaluation of potential targets/buyers - no choice at random
- No conflict of interests eg. from within the immediate private and business environment
- Effective handling of information without selective information processing
- 100% confidentiality without leaks to bidder
- Access to the top management on a broad range of companies
- Point of contact ≠ decision maker having the advisor as "protecting shield"
- Experience in this special field of negotiation
- Establish an open competition between potential investors

Two Common Methods of Company Valuation

1 Multiples

... can provide for an overall estimate of the enterprise value

Reference (turnover, EbIT, EbITDA)

Factor

Total value

Liabilities

Equity value

Net profit

Factor

After interest approach

=

=

Equity value

2 DCF-analysis

... is superior because synergies can be factored in

Free Cash Flow

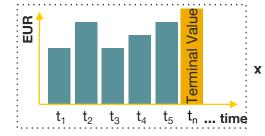

Х

X

EBIT

- adjusted taxes
- + depreciation
- +/- provisions
- gross Cash Flow
- +/- change in Working Capital
- investments
- = Free Cash Flow

Future projections

WACC (weighted average capital cost)

Cost of equity

- = Risk-free rate
 - + ß x (market yield-risk-free rate)

+

Cost of capital

= market rate for debt x (1-tax rate)

Discount factor (WACC)

Company value
- Value of
Liabilities
= Equity value

M&A buy side: TrueNorth supports in all stages of the buying

Mergers and Acquisitions Strategy

Due Diligence & Integration Setup

Post Merger Integration

Disinvestment -"Clean the House"

pre-mergel

- Define vision and strategy of "new" enterprise
- Define growth path and portfolio strategy
- Identify target and rough evaluation (strategy fit)
- Analyze potential synergies and enterprise value
- Work out draft
- Work out indicative price tag

- Commercial Due diligence (detailed market analysis and competitive position
- Financial und legal due diligence (by lawyers, auditors)
- Detailed analysis synergies
- Justify enterprise value
- Elaborate integration concept (organization, systems, sales, Production, purchase, etc.)
- Communication concept
- Define deal structure
- Merger preparation and Action plan
- Support negotiation and closing

- "Capture value"
- Establish business model (customers, products, sales channels, markets, ...)
- Establish operating model (organization, processes, systems)
- Integrate organization and leadership model
- Communicate! (integrate employees and middle management)
- Establish project management and monitoring
- Work out tax und legal issues

- Disinvestment strategy (for not necessary assets, licenses etc.)
- Define disinvestment targets
- Audit risk and counter synergies)
- Define deal structure for disinvestments (IPO, trades sale, spin-off, etc.)
- Masterplan disinvestment (organization, communication, legal, HR etc.)
- Start action plan

post-merger

- Establish project management and monitoring
- Tax und legal issues

M&A approach

@ 28. Februar 2018

- Target list with strategic fit
- Indicative price tags

Detailed target information and revised value

- Prepared merger with integration schedule
- Prepared closing

- Master plan with communication concept
- Readiness for day 1
- Started implementation and "value capture"
- Disinvestment concept und master plan
- Prepared disinvestment with de-integration plan
